## **Household Survey 2009 - Key Findings**

#### **Summary of Key Points**

- In 2009, 60% of respondents were satisfied with Council services overall compared to 58% in 2007
- The Council has failed to meet the 3 performance indicator targets identified via the Household Survey. The 3 indicators and outcomes against targets were

	Targets 2008/09	Actual 2009
Percentage satisfaction with Council Services	65%	60%
Percentage who feel safe in their local area during	90%	87%
the day		
Percentage who feel safe in their local area after dark	50%	45%

- A low percentage of respondents agree that the Council engages well with its residents (i.e. 29% of respondents agreed/strongly agreed that the Council listens to residents views and consults before major decisions)
- There are high levels of satisfaction with the way enquiries to the Council are dealt with (69% were very/fairly satisfied with the way enquiries to the Council are dealt with overall and 79% were very/fairly satisfied with the helpfulness of reception staff
- Satisfaction with local neighbourhoods has increased (from 64% in 2007 to 67% in 2009) but satisfaction with local town centres for entertainment (from 18% in 2007 to 14% in 2009) and shopping (from 55% in 2007 to 50% in 2009) have declined in 2009
- Levels of fear of crime (how safe people feel) have changed little since 2001 despite positive perceptions about changes in the actual levels of crime
- Satisfaction with recycling services has improved since 2007 (from 73% to 77%), but remains at a lower level than for the other related services such as refuse collection (86%) and civic amenity sites (87%).
- Satisfaction levels with the following leisure and recreation facilities have declined in 2009 – leisure centres, libraries, museums, Blackwood Miners Institute, community centres, adult education centres and youth centres
- Satisfaction with main parks and play areas have increased
- Satisfaction with all aspects of the local bus service has increased although satisfaction levels remain low in relation to some areas e.g. the state of bus shelters
- Satisfaction levels with most aspects of the neighbourhood road network have increased in 2009. In 2009 satisfaction levels with street lighting were 76%.

## **Household Survey 2009 - Key Findings**

In February 2009, a detailed postal survey was carried out with approximately 10,000 householders from right across the Caerphilly County Borough area (see **Appendix 1**) to determine levels of satisfaction with Council services as well as establishing current perceptions of crime throughout the area. Previous household surveys were completed in 2001, 2003, 2005 and 2007.

Overall, the response rate for the survey in 2009 was 18% compared to a 20% response rate for the 2007 survey. This level of response indicates that the results present a reasonable reflection of the attitudes and opinions of householders in the Caerphilly County Borough area although the respondent profile (see **Appendix 2**) needs to be taken into account in interpreting data. As with previous surveys, there was a much higher level of response from older age groups that is reflected in a higher proportion of respondents owning their home outright compared to the general CCB population.

In addition to the postal survey, questionnaires were sent to members of the Viewpoint Panel and, for the first time in 2009, also made available via the Council's Web site. Viewpoint Panel members returned 631 questionnaires and the Web survey elicited just over 100 responses. The demographic composition for the Web survey respondents was significantly different from the paper survey with 44% of respondents in the Web survey being under 30 compared to only 8% in the paper survey. This additional data has not been merged with the main household survey data to avoid skewing the data and enabling comparisons with previous paper surveys to be made directly. A separate comparative report will be prepared.

Throughout this report, the results are presented as a percentage (%) response based on the total number of responses to individual questions. To compare results between this and previous household surveys, wherever possible, the 'net satisfaction' score will be used. **Net satisfaction** is simply the **proportion satisfied minus the proportion dissatisfied** and gives a good indication of the overall level of satisfaction.

## Key Performance Indicators

The Council's Improvement Plan sets out the key priorities for the Council and monitors our performance against key target areas. The Household Survey has been used to identify a number of key performance indicators in relation to overall satisfaction and community safety.

The targets for 2008/09 and the actual scores as identified by the household survey are shown in **Table 1**.

Table 1: Key performance indicators identified by the Household Survey

	Targets 2008/09	Actual 2009
Percentage satisfaction with Council Services	65%	60%
Percentage who feel safe in their local area during the day	90%	87%
Percentage who feel safe in their local area after dark	50%	45%

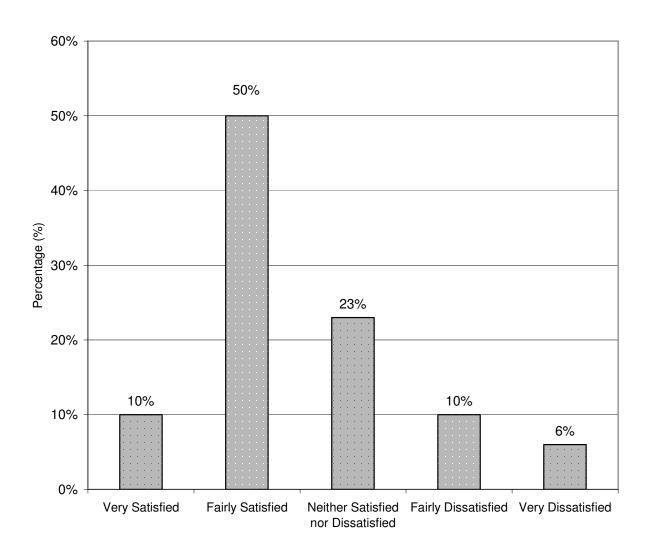

Further analysis of data that relates to the above performance indicator data will be highlighted in the appropriate sections of this report.

#### What the Public think about us...

As highlighted in **Graph 1**, the 2009 Household Survey shows that, taking everything into account, 60% of residents were satisfied with the services provided by Caerphilly County Borough Council.

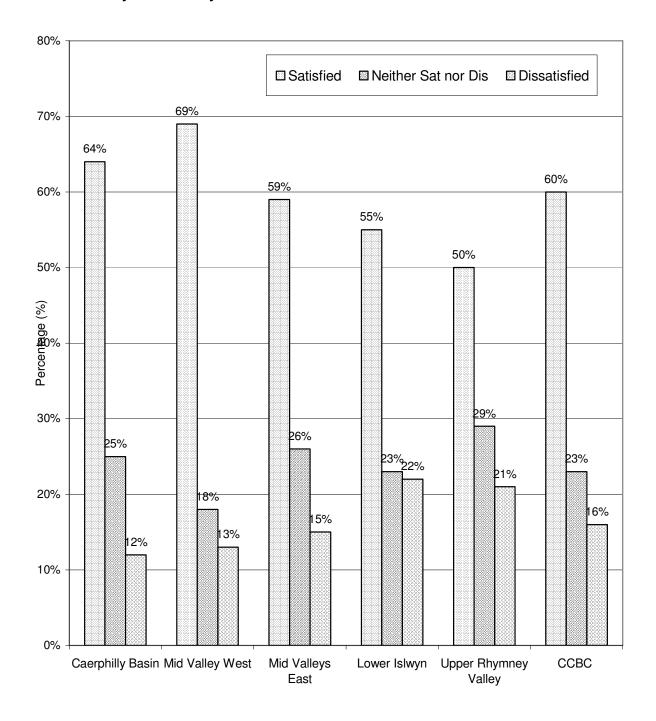

Although the Council has failed to meet targets in relation overall satisfaction (refer to **Table 1**) overall satisfaction levels have improved a little since 2007 when 58% of respondents were very or fairly satisfied with Council services overall. The proportion of people who were dissatisfied has declined from 19% in 2007 to 16% in 2009.

Graph 1: Satisfaction with Council services overall: Percentage of respondents who were satisfied or dissatisfied in 2009

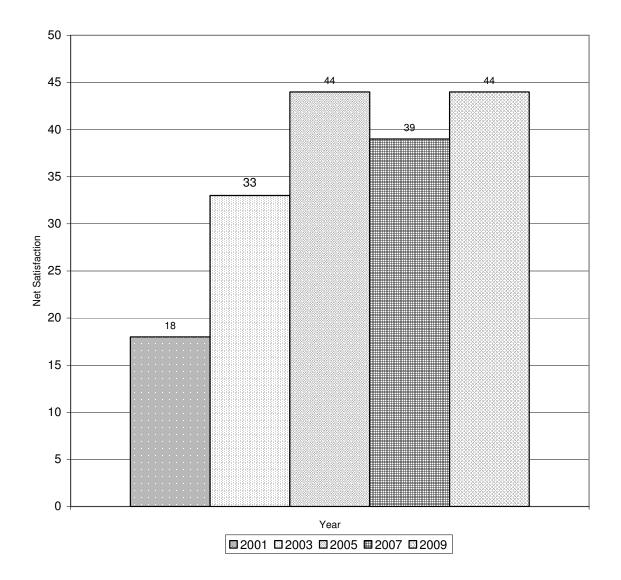

In 2009, there was a significant geographical variation in overall satisfaction with Council Services with 69% of residents in the Mid Valleys West area being very or fairly satisfied compared to 50% in the Upper Rhymney Valley. This variation is highlighted in **Graph 2**.

Graph 2: Overall Satisfaction with Council Services: Percentage satisfied/dissatisfied by Community Plan Area in 2009

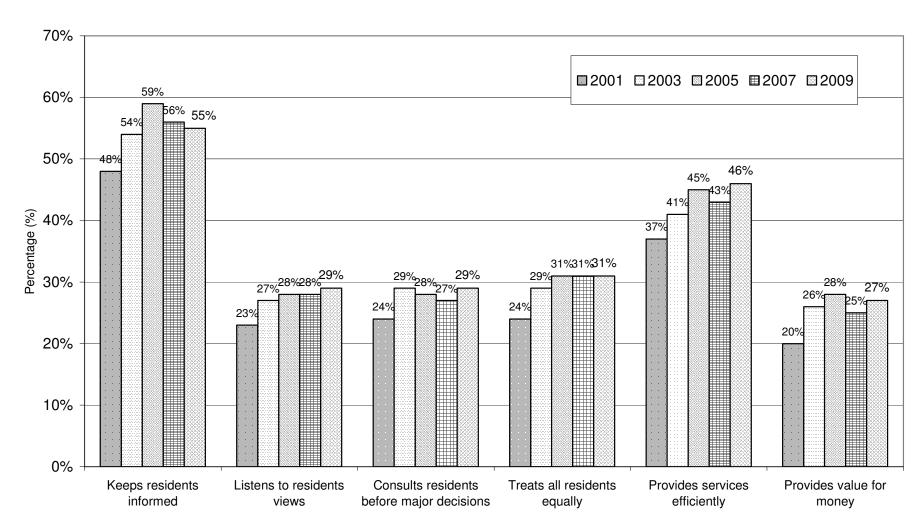

In comparing the results from the 2009 survey with previous years, it can be seen that the overall net satisfaction score has steadily improved since 2001. It declined in 2007 but has increased again in 2009 to match 2005 levels. These changes are shown in **Graph 3**.

Graph 3: Satisfaction with Council Services Overall: Change in Net Satisfaction between 2001 and 2009.

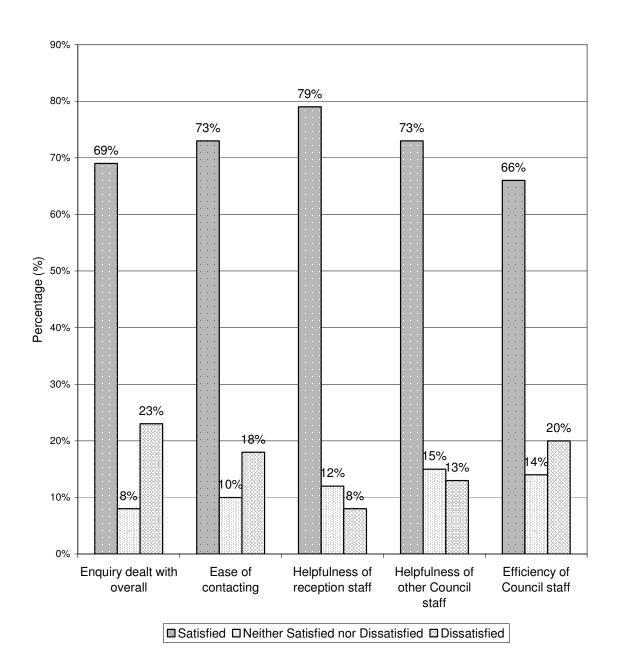

Through the Household Survey, residents were asked their perception of *how* the Council provides its services. As shown in **Graph 4**, just over half of all respondents agreed that the Council keeps residents informed. Less than half agree that the Council provide services efficiently and less than a third agree that the Council listens to residents views, consults before making major decisions, treats all residents equally or provides value for money. In 2009, there was a slight increase in the percentage that feel that the Council consults before major decisions, provides services efficiently and provides value for money. However, there was a decline in the percentage that feel that the Council keeps residents informed.

Graph 4: Perceived change in Council Services overall between 2001 to 2009: Percentage who agree or agree strongly that the Council...

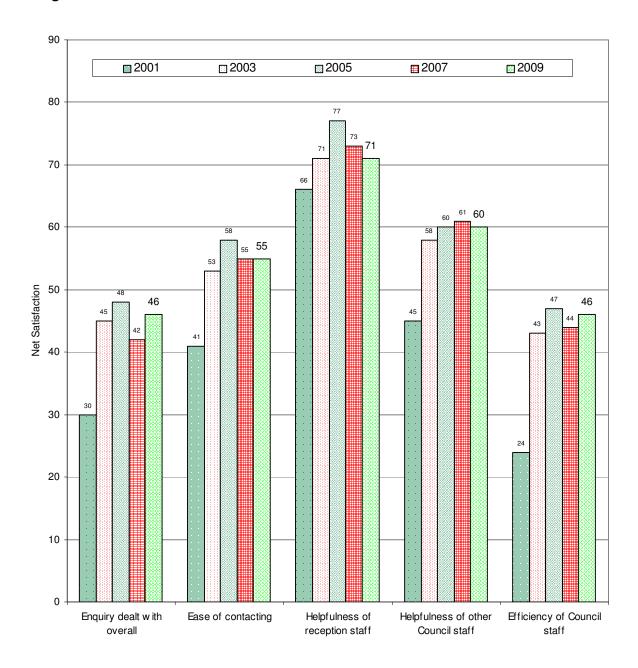

In the 2009 survey, 67% of residents who had contacted the Council during the last 12 months have done so via the telephone. Thirteen percent had visited Council offices. A larger proportion than previously are now contacting the Council using electronic methods with 6% using e-mail and a further 3% contacting the Council via the Website. ("Website" was a new option included in the survey for 2009. **Graph 5** shows high levels of satisfaction with the way enquiries to the Council were dealt with. Respondents were particularly satisfied with the helpfulness of reception staff.

Graph 5: Satisfaction with the way enquiries to the Council were dealt with: Percentage of respondents who were satisfied or dissatisfied in 2009.

**Graph 6** highlights the change in net satisfaction between 2001 and 2009 in relation to the way enquiries to the Council were dealt with. Satisfaction with the way enquiries were dealt with *overall* and efficiency of council staff has increased since 2007 but has not returned to the level of 2005. There has been a decline in the net satisfaction with the helpfulness of reception staff and ease of contacting the Council since 2005.

Graph 6: Satisfaction with the way enquiries to the Council were dealt with: Change in Net Satisfaction between 2001 and 2009.

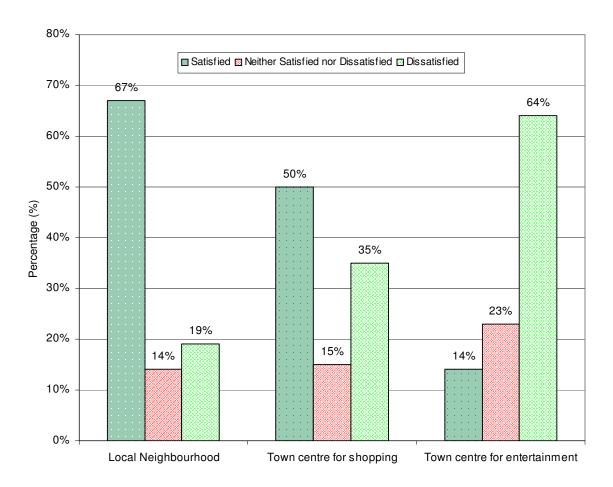

### Living environment

**Graph 7** highlights that in the 2009 Household Survey, 67% of residents are satisfied with their local neighbourhoods. Only half were satisfied with town centres for shopping and only 14% were satisfied with town centres for entertainment.

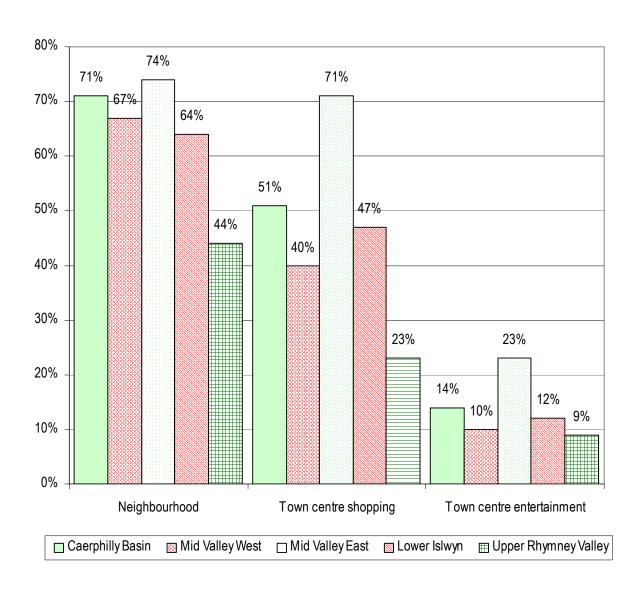

There has been a steady increase in net satisfaction with local neighbourhoods since 2001 but a big decline in satisfaction with town centres, particularly for entertainment since 2005 (please refer to **Graph 21**).

Graph 7: Satisfaction with local neighbourhoods and town centres: Percentage of respondents who were satisfied or dissatisfied in 2009.

There was a geographical variation in satisfaction with neighbourhoods and town centres for shopping and entertainment in the 2009 survey. Residents in the Upper Rhymney Valley were least satisfied with neighbourhoods and town centres whilst residents in the Mid Valleys East area were most satisfied with their neighbourhoods and local town centres. **See Graph 8**.

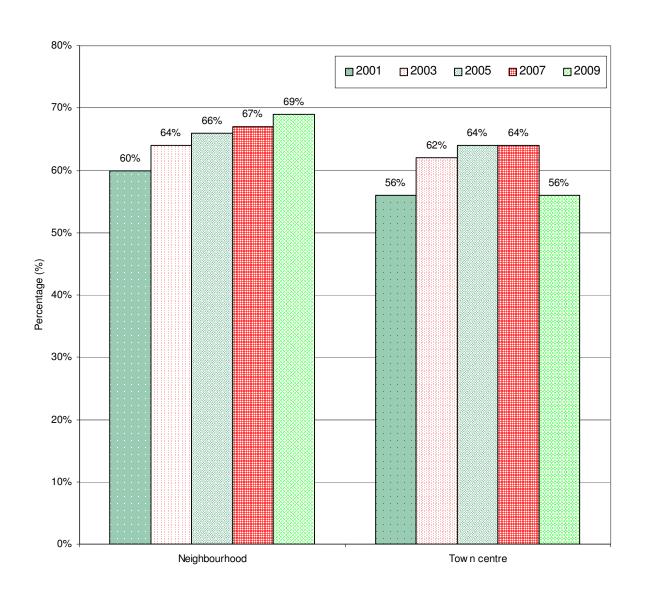

Graph 8: Satisfaction with Town Centres for Shopping and Entertainment by Area: Percentage of respondents very/fairly satisfied with neighbourhoods and town centres for shopping and entertainment

Following on from the levels of satisfaction with neighbourhoods identified in **Graph 7**, over two thirds of respondents felt that the quality of life in their neighbourhoods had got better or stayed the same in the 2009 survey.

**Graph 9** highlights that perception of the quality of life in *neighbourhoods* has been improving since 2001. Perception of quality of life in *town centres* was improving until 2007 but has declined in 2009 with 44% perceiving that the quality of life in town centres has got worse (the level for 2001 figures) despite major efforts on improving community safety and the general town centre environment.

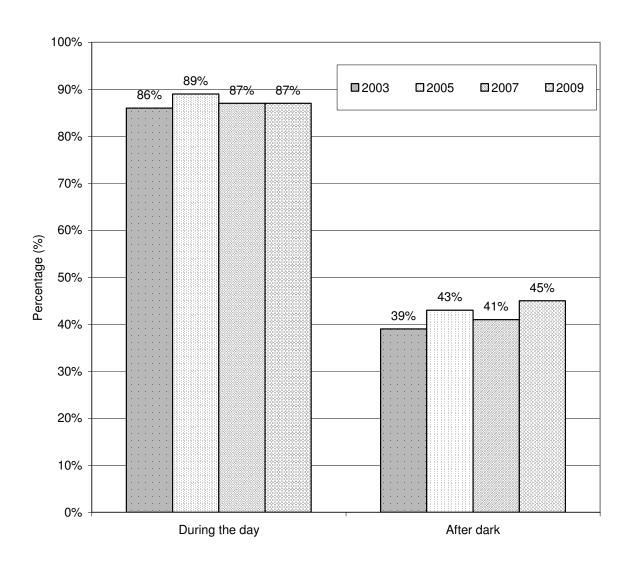

Graph 9: Quality of Life in Neighbourhoods and Town Centres: Percentage who felt the Quality of Life has got better or stayed the same

Referring back to the performance indicators relating to fear of crime (**Table 1**), in 2009, 87% of respondents indicated that they felt safe during the day (the same figure as 2007) whilst the percentage who feel safe in their local area after dark has increased from 41% in 2007 to 45% in 2009. **Graph 10** highlights that there has been very little change in daytime fear of crime since 2003 (no data is available for 2001).

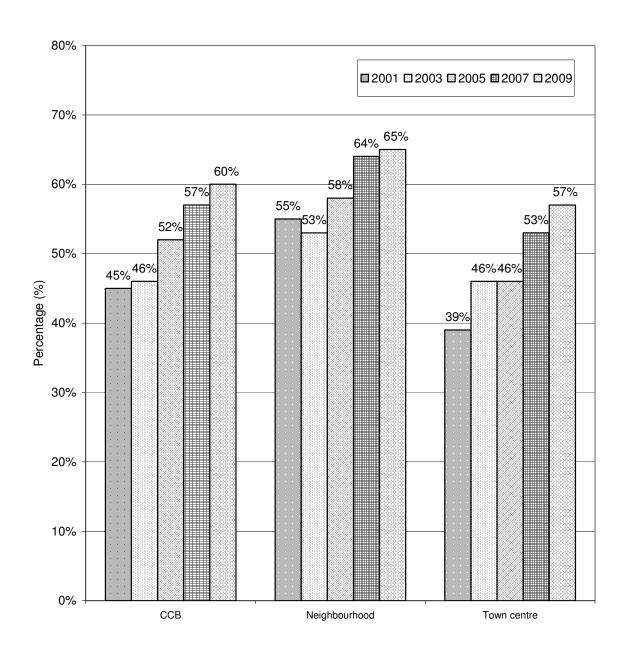

There has been a small improvement in fear of crime after dark. Geographically, fear of crime during the day was lowest in Caerphilly Basin with 91% indicating that they felt safe walking in their neighbourhood during the day compared to the Upper Rhymney Valley where 84% felt safe walking in their neighbourhood during the day. This variation is mirrored after dark with 49% of those in the Caerphilly Basin area feeling safe compared to 37% in the Upper Rhymney Valley.

Graph 10: Fear of Crime whilst walking in neighbourhood 2003 - 2009: Percentage who felt very safe or fairly safe during the day and after dark.

Although fear of crime scores have shown little change since 2003, the perceived *level* of crime in Caerphilly County Borough as a whole and in neighbourhoods and town centres has slowly improved since 2001. See **Graph 11**.

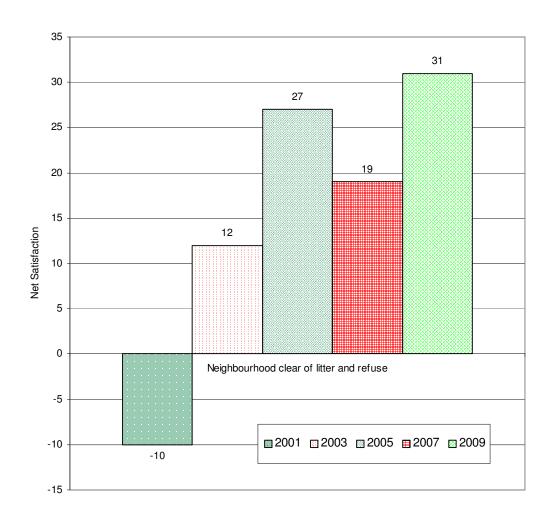

Graph 11: Changes in the level of Crime and Disorder across Caerphilly County Borough and in Neighbourhoods and Town Centres: Percentage who felt that the level of crime had got better or stayed the same.

Satisfaction levels with the cleansing and waste services provided by the Council has always been high. In recent years, environmental awareness amongst the general public has increased greatly. Recycling, for example, is now seen as part of our everyday lives and the Council has done much to increase its recycling levels. It is within this context that the Household Survey has identified an increase in satisfaction with the council in relation to cleansing and waste services.

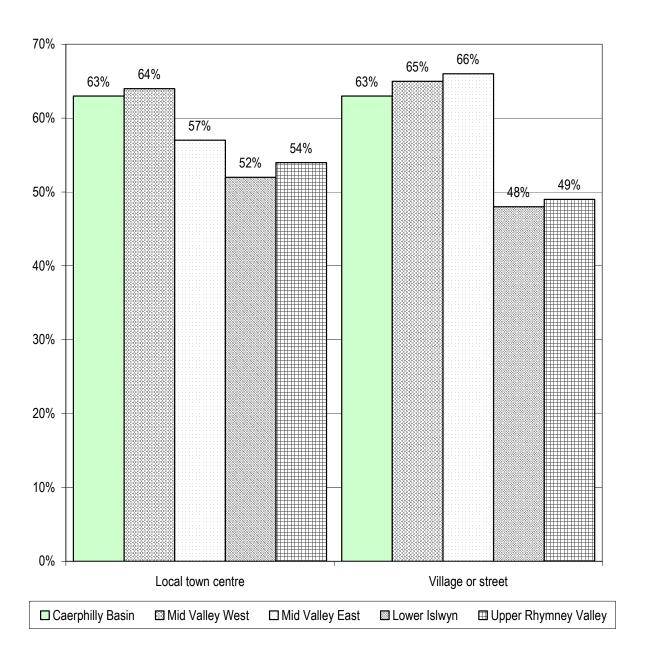

In 2009, 61% of respondents felt that the Council fulfils its duty to keep neighbourhoods clear of litter and refuse. In comparing the data with previous surveys (**Graph 12**) it is clear that satisfaction levels have increased significantly since 2001 when there was a negative net satisfaction score. Although satisfaction levels fell in 2007 they have improved again in 2009.

Graph 12: Caerphilly County Borough Council keeps local Neighbourhoods clear of Litter and Refuse: Change in Net Satisfaction between 2001 and 2009.

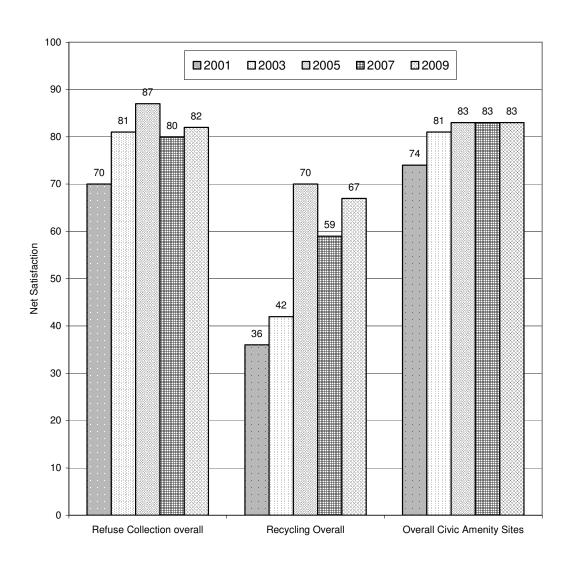

Overall, 59% of respondents were satisfied with the general cleanliness of their local town centre whilst 58% were satisfied with the overall cleanliness of their village or street. In relation to both, there was a geographical variation in satisfaction. The area of lowest satisfaction with cleanliness of both town centres and local village or street was Lower Islwyn. Respondents from the Mid Valleys West area were most satisfied with the cleanliness of their local town centre but residents in the Mid Valleys East area were most satisfied with the cleanliness of their local village or street. This variation is highlighted in **Graph 13**.

Graph 13: Satisfaction with cleanliness of local town centre and local village or street – percentage very or fairly satisfied by area

In relation to civic amenity sites, overall, 86% of respondents were very or fairly satisfied. A similar percentage of respondents (87%) were satisfied with the refuse collection service overall. These figures have not changed significantly since 2007. However, an improvement in overall satisfaction levels were noted in relation to recycling services where 73% were very or fairly satisfied in 2007 compared to 77% in 2009. Satisfaction levels with recycling services are still slightly lower than in 2005 and lower. **Graph 14** highlights the change in net satisfaction scores in relation to refuse collection, recycling facilities and civic amenity services overall.

Graph 14: Satisfaction with refuse collection, recycling facilities and civic amenity services overall: Changes in Net Satisfaction between 2001 and 2009.

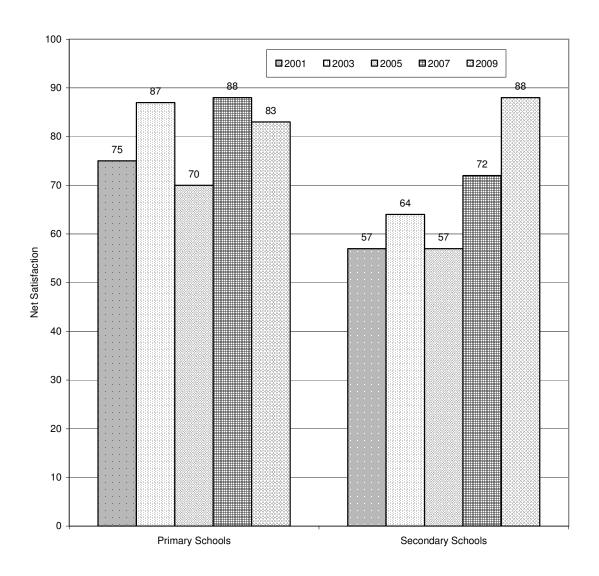

### Education for life

Note: School services were only used by a small proportion of survey respondents. In view of this, the findings in relation to some aspects of school services should be received with caution. Where less than 100 responses were received, the data cannot be considered reliable.

In the 2009 survey, 89% of those who use primary schools were satisfied with them, as were 91% of users of secondary schools. **Graph 15** highlights change in net satisfaction since 2001. In relation to primary schools, net satisfaction has declined but satisfaction with secondary schools has increased significantly.

Graph 15: Satisfaction with School Services: Change in Net Satisfaction between 2001 and 2009

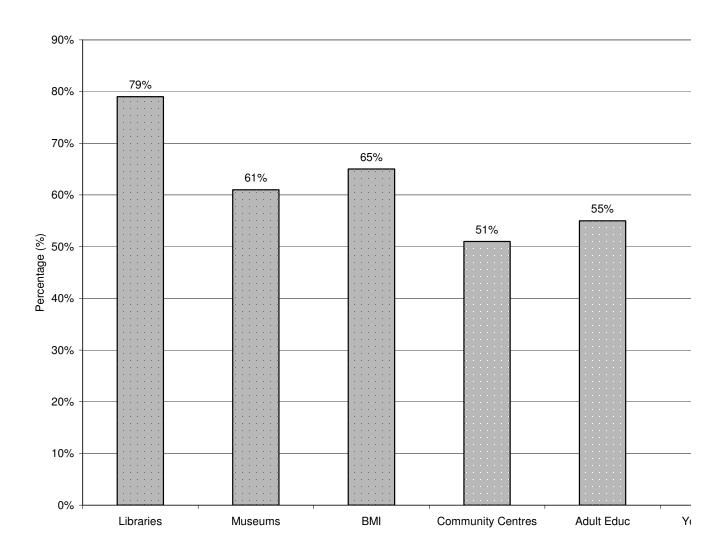

The 2009 survey showed a range of usage and satisfaction levels in relation to leisure and recreation services and facilities. The age groups of respondents need to be taken into account when considering usage levels, for example, 89% of respondents indicated that they have never used youth centres. This would be expected given that only 8% respondents to the survey were less than 30 years old. **Appendix 3** (question E1 - E9) provided a summary of usage levels.

In relation to libraries, 36% of respondents have never used them and 79% of respondents were very or fairly satisfied with libraries (whether they had used them or not). For community centres, the level of satisfaction amongst respondents was lower at 51% and a higher proportion of respondents (57%) had never used them.

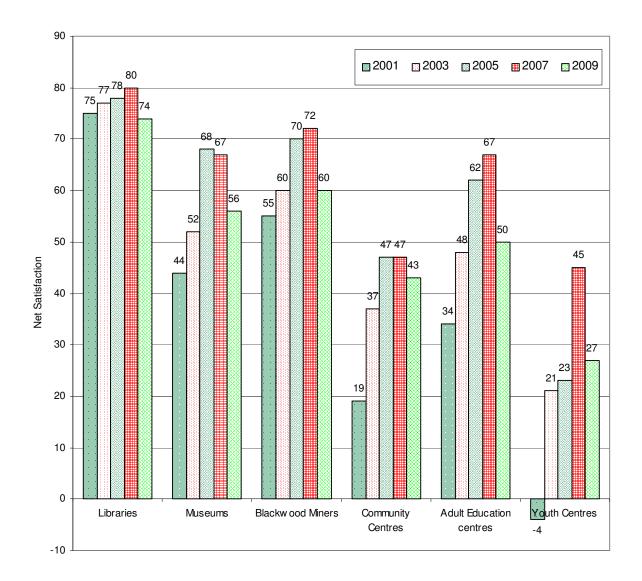

**Graph 16** highlights levels of satisfaction with the range of recreation services and facilities.

Graph 16: Satisfaction with recreation facilities and services provided by the Council: Percentage of respondents very or fairly satisfied in 2009.

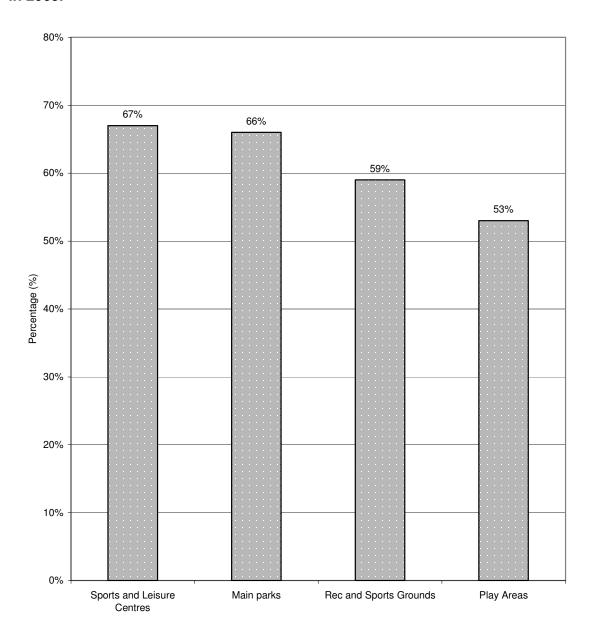

**Graphs 17** highlights the changes in net satisfaction with recreation facilities and services. There was a general increase in net satisfaction levels from 2001 but a significant decline across the service area in 2009.

Graph 17: Satisfaction with recreation facilities and services provided by the Council: Change in Net Satisfaction between 2001 and 2009

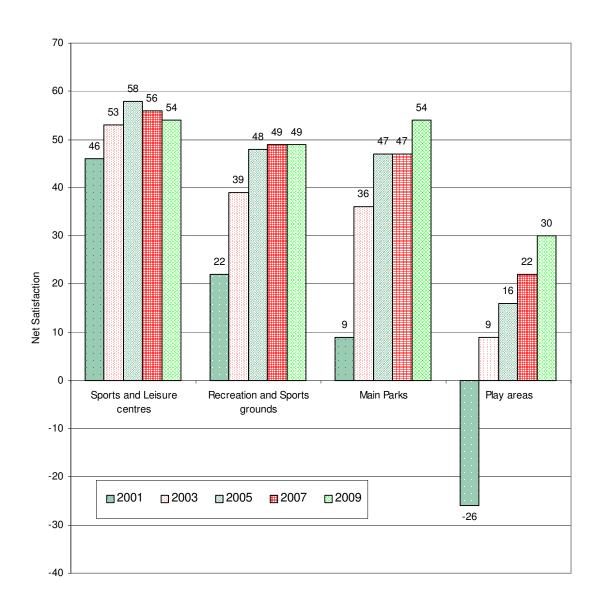

**Graph 18** highlights levels of satisfaction with the range of recreation services and facilities. More than two thirds of respondents were sports and leisure centres and main parks but only just over half were satisfied with play areas.

Graph 18: Satisfaction with leisure and sports, parks and play services and facilities provided by the Council: Percentage of respondents very or fairly satisfied in 2009.

Although satisfaction levels with sports and leisure centres were relatively high, satisfaction levels have declined since 2005. Where satisfaction levels are relatively low for play areas, levels have increased significantly from 2001. **Graph 19** highlights these changes in net satisfaction for leisure and sports, parks and play services and facilities.

Graph 19: Satisfaction with leisure and sports, parks and play services and facilities provided by the Council: Change in Net Satisfaction between 2001 and 2007.

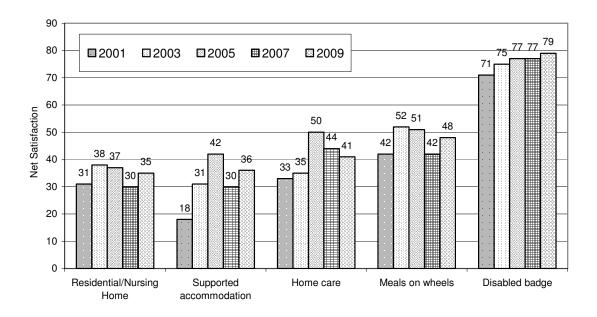

### Health, Social Care and Well being

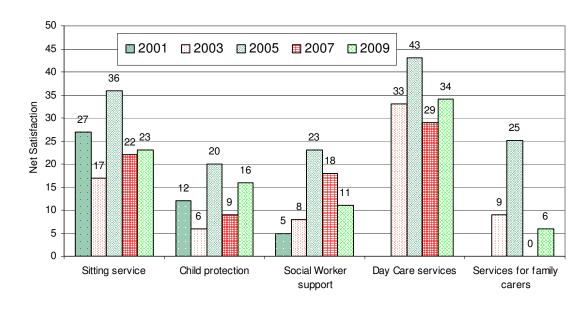

Note: the findings in relation to some aspects of social services should be received with caution. As expected, there were low numbers of responses to some of the Social Services questions in the Household Survey and as such, it has not been possible to draw valid conclusions in relation to some service areas.

As shown in **Graphs 20a and 20b**, levels of satisfaction have, on the whole, improved since 2001. The area of greatest satisfaction is also the most widely used service i.e. the disabled (blue) badge scheme.

Graph 20a: Satisfaction with Social Services. Change in Net Satisfaction 2001 - 2009

Graph 20b: Satisfaction with Social Services. Change in Net Satisfaction 2001 - 2009

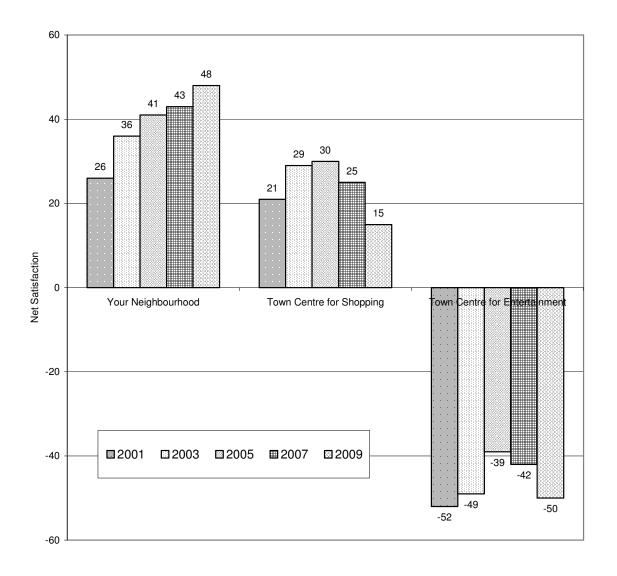

## Regeneration

Relating back to **Graph 7**, 67% of respondents were satisfied with their neighbourhoods and half were satisfied with their local town centres for shopping. Only 14% were satisfied with their local town centre for entertainment.

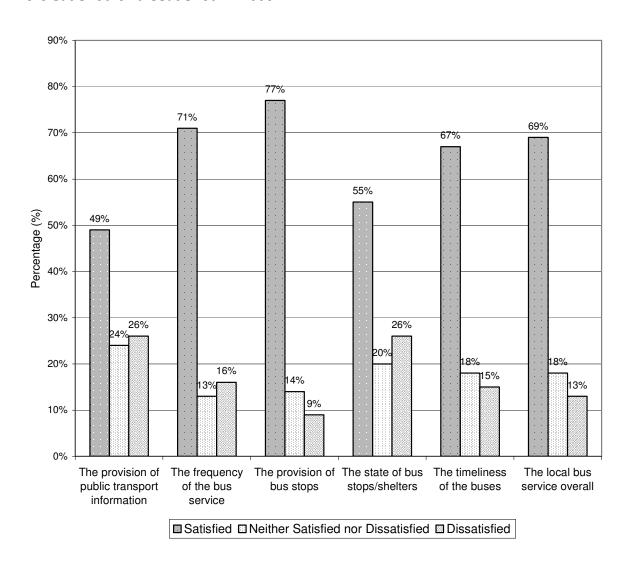

When comparing the responses for 2009 survey with previous years (**Graph 21**), there were significant declines in satisfaction levels for town centres for both shopping and entertainment that were already at a low level.

Graph 21: Change in Net Satisfaction with Neighbourhoods and Town Centres between 2001 and 2009

In 2009, satisfaction with the local bus service overall (amongst both users and non users) was relatively high with 69% of respondents indicating satisfaction (see **Graph 22**). Provision of bus stops was the area of greatest satisfaction (77%) although only just over half were satisfied with the state of bus shelters (55%). Less than half were satisfied with the provision of public transport information.

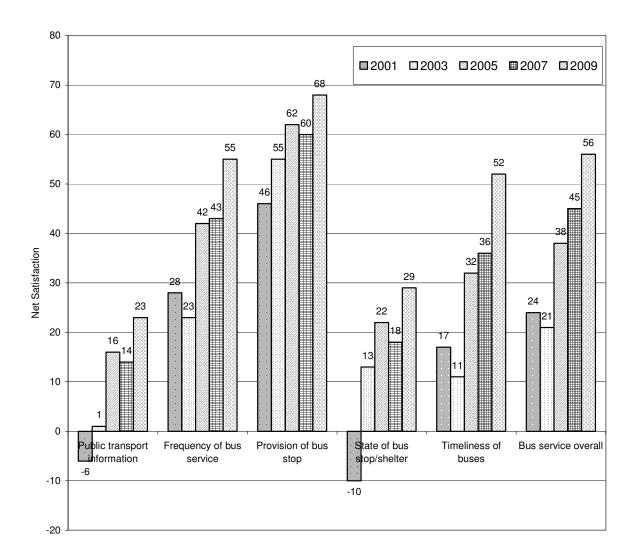

Graph 22: Satisfaction with local bus services: Percentage of respondents who were satisfied or dissatisfied in 2009.

There was geographical variation in satisfaction with the local bus service overall with 75% of respondents in the Caerphilly Basin area indicating that they were very or fairly satisfied. A similar percentage (73%) of respondents from Lower Islwyn were satisfied. The percentage of those very or fairly satisfied in the Mid Valleys East area was 65% and in both the Upper Rhymney Valley and Mid Valleys West areas was 61%.

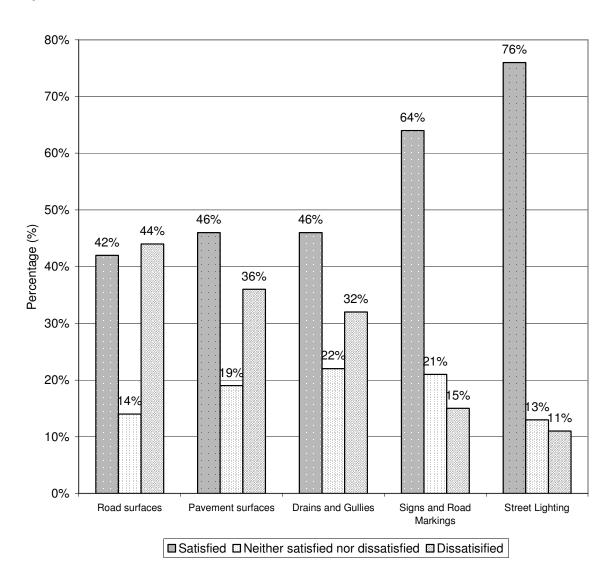

Satisfaction with all aspects of the local bus service have shown a marked improvement since 2001 as highlighted in **Graph 23**.

Graph 23: Satisfaction with local bus services: Change in Net Satisfaction between 2001 and 2009

Satisfaction levels with street lighting in the 2009 survey were high with 76% of respondents indicating satisfaction. Satisfaction with road surfaces was low with only 42% of respondents indicating that they were very or fairly satisfied (**Graph 24**).

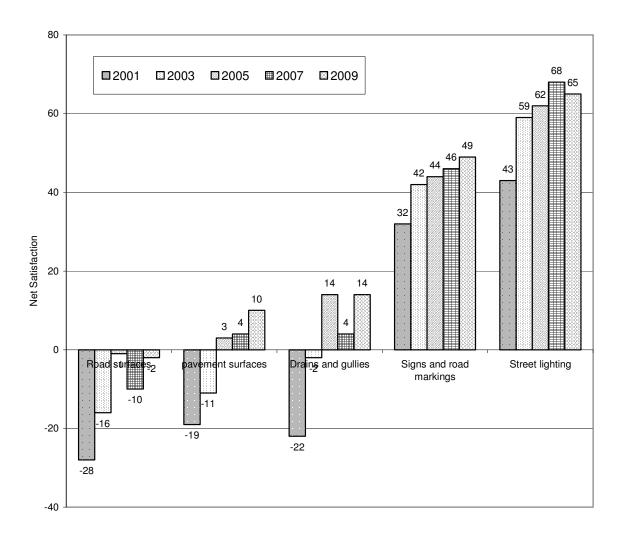

Graph 24: Satisfaction with neighbourhood road network: Percentage of respondents who were satisfied or dissatisfied in 2009.

There were geographical differences in the level of satisfaction with road surfaces. Only 31% of respondents were very or fairly satisfied in the Upper Rhymney Valley. This figure rises to 37% in Lower Islwyn, 38% in the Mid Valleys East area and 44% in Mid Valleys West. The area of greatest satisfaction with road surfaces was the Caerphilly basin where 49% of respondents were very or fairly satisfied.

As shown in **Graph 25**, overall, there has been marked improvement in satisfaction levels with most areas of the neighbourhood road network since 2001. Although satisfaction levels with street lighting are generally high, this is one area where satisfaction has declined in 2009.

Graph 25: Satisfaction with the Neighbourhood Road Network: Change in Net Satisfaction between 2001 and 2009.

Fairly Satisfied

41%

- The percentage response indicated for each question (i.e. the valid percentage) is based on the total number of responses to that question and not the overall number of questionnaires returned. Where the number of responses is less than 100(\*), results are represented as number of individuals rather than percentages.
- Percentages do not always add to exactly 100% because of the effects of rounding to the nearest unit per cent.
